November 12, 2008 – For Immediate Release

JBL Loudspeakers In Winner's Circle At 2008 FORMULA 1™ SingTel Singapore Grand Prix

NORTHRIDGE, California – In a high-profile, international event highlighting the suitability of JBL VERTEC® loudspeakers for demanding applications, global production design and lighting specialty vendor Valerio Maioli SPA was contracted to provide the lighting, CCTV, trusses and public address for the inaugural FORMULA 1™ SingTel Singapore Grand Prix. The event took place on September 28 on a street circuit of public roads around the Marina Bay area in Singapore. The race was the first to be held at night in FORMULA 1 history, with the timing of the night event enabling live broadcasts at a time convenient for European TV audiences. Over 110,000 tickets were made available for this first street race held in Asia, and a full sell-out was achieved.

For specialized audio functions in the pit building which served drivers, factory teams, race management and the global media, Electronics & Engineering Pte Ltd. of Singapore worked under Valerio Maioli SPA for the supply, installation and operation of the audio systems in four main areas of the pit building, including the Media Centre, Paddock Club Suites, Press Conference Room and the Podium area.

In the main grandstand podium area, which in addition to race announcements was used to support the opening and awards ceremonies for the main event and all supporting races, individual JBL VERTEC VT4887A compact line array elements were truss-mounted to provide premium, high-output sound coverage in the VIP area nearest the podium zone. A bi-amplified, 3-way system, the VT4887A features JBL's exclusive Differential Drive™ component transducers with neodymium magnets and dual voice-coils for maximum output power and premium fidelity from a small package.

JBL VERTEC VT4887A and Control Contractor loudspeakers were in use for the inaugural FORMULA 1 SingTel Singapore Grand Prix.

Additionally, the press conference room was served by a group of JBL Control 29AV-1 premium indoor/outdoor monitor speakers. The audio system at the media centre, featuring JBL Control 24CT in-ceiling speakers for background music and paging was a localized system, used to feed race commentary and press-conference audio to the media centre. The paddock club suites were equipped with Control 23T ultra-compact indoor/outdoor background/foreground loudspeakers.

“JBL’s wide range of professional loudspeaker products includes a broad number of effective system solutions,” observed Gary Goh, Project and Applications Manager for Electronics & Engineering Pte Ltd. “It was an historic occasion for the Formula One Grand Prix to be staged here in Singapore, and our entire team was proud to play a part in the sound reinforcement aspects of the event using JBL.”
